

# Overview

## Welcome to the API Section

In order to gain access to the NetFoundry system via API you need to create a ClientId and ClientSecret using the console.

Here is how to get clientId and secret from NFconsole.

login to nfconsole ->organization->Manage API account-> click '+' sign to create one.

provide the required details and click on generate token.

## Generate API Account

NAME YOUR APPLICATION

REQUIRED

Jackjones

CONTACT EMAIL

REQUIRED

Jackjones@example.com

DESCRIPTION

Enter a description for the application

Oops, no get me out of here

**GENERATE TOKEN**

Copy the clientID and secret and save it securely.

The image shows a dialog box titled "Generate API Account" with a close button (X) in the top right corner. It features a key icon on the left. The main text reads: "Your secret key will only be displayed once Please save it before closing this window". Below this, there are two sections: "CLIENT ID" and "SECRET". Each section has a blue bar representing the value, which is mostly obscured by a blue brushstroke. The "CLIENT ID" bar ends with "3e" and the "SECRET" bar ends with "uS". To the right of each bar is a "CLICK TO COPY" link. At the bottom right, there is a blue "CLOSE" button.
